Silvon Software Partners with RPE to Bring a Web-Based Mobile Interface to Retailers

Westmont, IL, August 17, 2011 — Business Intelligence solution provider Silvon Software, Inc. has partnered with retail consulting firm RPE (Retail Process Engineering) to bring a powerful, web-based business analysis software interface to retailers. Under the terms of the agreement, RPE will market Silvon's **Viewer** interface for **Performance Analysis by IDEAS**, a client-server BI application for JDA Software Group's Merchandise Management System. This new optional interface for Performance Analysis by IDEAS will provide many added features for today's mobile professionals.

"**Viewer for IDEAS** will empower our retail customers to easily deliver scorecards, dashboards and reports to executives, line-of-business managers, store managers and numerous other stakeholders across their value chains," said Rob Henneke, Executive Vice President at RPE. "We're pleased that Silvon has provided this mobile solution, which will further enhance the value that RPE offers to our retail clients."

"It's a pleasure for Silvon to team up with such a highly regarded consulting organization like RPE," said John Hughes, SVP Sales and Marketing at Silvon. "We look forward to helping their **IDEAS** customers improve the effectiveness of their merchandising efforts by leveraging the application's processing power, industry best-practice metrics for analyzing point-of-sale and inventory data, along with the latest advancements in information delivery technology."

According to Hughes, the **Viewer for Performance Analysis by IDEAS** interface includes Portal and Reporting Services functionality, allowing customers to create business intelligence portals and custom reports out of the box without the need to invest in additional software. Another powerful feature of the interface is its Exception Management facility, which allows retailers to monitor and react proactively to various business conditions like poor performing locations, excessive shrink or void rates and end delivery performance below required levels.
