Today more than ever, manufacturers are striving to become demand driven while sustaining high levels of efficiency and utilization. Businesses are also seeking to decrease Work In Process inventory while remaining responsive to increased demand for more customized products.

The performance analytics offered by the Manufacturing Performance Management (MPM) module of Stratum play a fundamental role for today’s customer-driven enterprise by helping businesses evaluate and better understand the efficiencies of their production operations. After all, if you want to improve order fulfillment rates, decrease inventories and boost margins, you need to measure progress against these objectives and immediately make and act on business decisions that impact them.

With MPM, companies gain an immediate return on investment by leveraging 80+ pre-defined analyses and reports devoted specifically to measuring the performance of your production operations.

Production Performance

Operations Analysis

Stratum MPM allows you to access pertinent day-to-day operational information to ensure that you can accommodate customer demand and that resources are optimally utilized. And by integrating it with other Stratum modules, you’ll gain visibility into open customer orders, forecasts and inventory levels to ensure that open work orders are satisfying demand and that you are not building inventory unnecessarily.

• Compare expected demand to supply — including inventory, in transit and existing WIP — for any product and input additional work orders as needed to meet demand
• Monitor WIP levels at the plant, department and work center level to ensure they stay within acceptable limits
• Determine what bottlenecks exist and how these can be averted to streamline the production process and avoid late shipments
• Review open orders at month end to determine what WIP exists and can be closed out
• Evaluate scheduled production and determine if the necessary resources are available
**Variance Analysis**

Production variances are expected, but not always understood. Stratum MPM enables you to analyze labor, material and overhead variances all the way from the plant level down to the department or shift level to pinpoint problem areas and anticipate problems before they surface.

- Analyze material cost over time to determine trends and identify areas of concern
- Analyze material usage variances by plant, department or work center to determine causes of inconsistency
- Determine if labor rate variances are increasing and why — for instance, are actual labor rates and hours increasing or are standards unrealistic
- View variances at the plant level and drill to individual departments and shifts to analyze areas of concern

**Maintenance & Repair (MRO) Performance**

You can also leverage Stratum MPM to measure Maintenance and Repairs of your production equipment. Use it to monitor machine downtime, including unplanned events. Track the maintenance history of your equipment so you can better plan and manage your future maintenance requirements and associated expenses. Easily see what your backlog is to plan machine utilization more effectively. And use Stratum MPM to monitor the status of your work orders so you can quickly pinpoint potential delays that may impact forecasted utilization dates.

- Compare actual and standard hours across plants and departments to pinpoint labor efficiency variances
- View all variances over time to identify which ones are showing improvement and which ones require more attention

**Manufacturing Scorecard**

Stratum MPM also provides a complete set of production execution performance analytics that help you understand past performance and improve future performance and profitability in the areas of downtime, scrap, performance to schedule, production variance, standard utilization, efficiency, and productivity. And it consolidates all of these performance measurements into a single view, or scorecard, from which you can easily drill down to lower levels of detail for more in-depth analysis.

The Multiple Planning, Analysis & Reporting Options of Stratum

Leverage Pre-Defined Analysis & Reporting
Stratum lets you gain an immediate return on investment by providing hundreds of pre-built business views and reports that are easily configured to your business. Plus, it’s ready to accommodate you with a modular approach that lets you extend its analyses and reports across the enterprise as you need them.

Powerful Planning Applications
Stratum reaches beyond the capabilities of other analysis and reporting solutions by letting you to model out and predict sales forecasts, pricing, inventory replenishment and more, using a collaborate budgeting and forecasting function.

Inquiry
You can leverage Stratum’s powerful inquiry capabilities to drill down into a specific area to pinpoint the answers you need. Plus, you can view the data in graphical format, making the process of analyzing the performance of your business faster and easier.

Quick KPIs
Stratum includes more than 500 pre-defined sets of Key Performance Indicator (KPI) measurements. These KPIs give executives and managers the ability to quickly identify your company’s strengths and weaknesses and provide a starting point for performance improvement by showing whether or not your business is in line with its strategic objectives.

Alerts
With built-in alerts, you gain crucial monitoring, proactive notification, and automation capabilities that help your company adapt to changing conditions and avoid alarming scenarios pertaining to payables, receivables, budgets, sales, and inventory. Pre-set any number of business rules and let Stratum protect you from failing to respond to deviations from acceptable levels by automatically sending alerts to those people who can take immediate action.

Dashboards
Stratum also offers dashboarding capabilities to give your executives a one-stop, graphical snapshot of the business’s health. Our dashboards are easy to understand, often highlighting important KPIs, revenues by period, product sales by category, actual vs. budgeted financial indicators, and expenses by category, to name just a few. We’ve also made it easy for you to include Stratum dashboards on portal pages.

Flexible Reporting
When you wish to send static reports of your operational analyses to internal users, customers or suppliers, Stratum lets you automate the entire process of creating, generating and distributing great-looking reports. The reports can be saved in numerous formats like Adobe PDF and Microsoft Excel. Plus, they can be systematically scheduled for regular distribution by email to any user you desire, whether internal or external to your business.

Robust Data Repository
Stratum protects your current technology investment by integrating with and leveraging the data you already have in your ERP, CRM and other business systems. Our enterprise connectors allow you to easily extract, transfer and load your data into an enterprise data repository that ultimately becomes the “single version of the truth” for your entire business.
